

```
1. $ bitbake linux-granite-upstream -c menuconfig
```

Note:

-c menuconfig,是小写的c

生成的.config在tmp/work/granite2-poky-linux-gnueabi/linux-granite-upstream/3.18.7+gitAUTOINC+6138ba818f-r0/linux-granite2-standard-build directory
3.18.7+gitAUTOINC+6138ba818f-r0是当前fetch的commit SHA-ID

```
1. $ bitbake strace
```

create strace utility

要修改kernel config value , 并起作用(但避免commit modification)

1. add / modify config value in build-bundle/meta-granite/recipes-kernel/linux/files/pegmatite.cfg
2. bitbake -C compile -f linux-granite-upstream
3. tmp/work/granite2-poky-linux-gnueabi/linux-granite-upstream/3.18.7+gitAUTOINC+6138ba818f-r0/image/boot
