workaround #1

add the following line in config file

in include/configs/pegmatite.h

```
1.  #define DEBUG
```

workaround #2
add the following code into include/common.h

```
1.  #ifndef DEBUG
2.  #define DEBUG
3.  #endif
```

修改的目的如下

in include/common.h

```
1.   #ifdef DEBUG
2.   #define _DEBUG  1
3.   #else
4.   #define _DEBUG  0
5.   #endif
6.
7.   #define debug_cond(cond, fmt, args...)        \
8.       do {                                 \
9.           if (cond)                \
10.              printf(pr_fmt(fmt), ##args);    \
11.      } while (0)
12.
13.  #define debug(fmt, args...)          \
14.      debug_cond(_DEBUG, fmt, ##args)
```

使得debug()的输出都有效。
